

Product Information

Australia / New Zealand Wiring Devices

AS/NZS 3112:2000 Plugs and Socket Outlets.

This Standard which was revised in the year 2000, requires all 2 pin and 3 pin plugs up to a rating of 15 Amperes to have insulated "live" pins, by not later than April 3rd 2005.

The use of insulation on the live portion of pins which do not engage with the contacts of socket outlets, eliminates the following when the plug is partially engaged into the socket:

- the possibility of an infant's fingers contacting live pins
- the possibility of small metal objects falling between the plug and the socket, contacting live pins.

The 10 Ampere Australian plug (AS 3112) is used in Australia, New Zealand, Fiji, and Papua New Guinea. Australia's plug and socket system is described in SAA document AS 3112. The plug face is circular, approximately 40 mm in diameter, and 17 mm (live pin and neutral pin) – 20 mm (earth pin) in length from plug face. Standard plug and socket ratings are 10A, 15A, and 20A at 240V a.c. 50 Hz. A cordset with clear plug is recommended for use on medical equipment in Australia.
