

Typ 12

Switzerland

The Swiss plug is specified in SEV 1011. It is a variation of the CEE 7 plugs and sockets used throughout most of Europe, but because of the grounding pin, this Swiss version does not mate with the CEE types.

The standard Typ 12 plug (10A / 250V AC) (illustrated) is usually used in the Switzerland.

New Typ 23 plug (16A / 250V AC) features:

- 1 plug for general use (1-line) to 3680W
- Alternate for the 10A/400 V - operation
- Cost savings compared to the conventional 3-line operation
- compact design
- saves the modification of foreign devices to use on the Swiss market

See [Doc #2259](#) for more infos on Typ 23 plug.
